SciSure SCIENTIFIC MANAGEMENT PLATFORM

# Statement on ISO 27001 Certification and the Integration of Labfolder into SciSure

Following the acquisition of the Labforward Labfolder platform by SciSure B.V., all Labfolder related operations have been fully integrated into SciSure's organizational and information security framework.

As part of this transition, the former Labforward ISO 27001 certification has reached the end of its validity period and will not be renewed separately. Instead, **all Labforward teams, systems, and processes now operate under the SciSure Information Security Management System (ISMS)**, which is aligned with the ISO 27001:2022 standard.

**SciSure successfully completed its most recent ISO 27001 audit** with DEKRA at the end of September 2025, and the renewed certificate is currently being finalized. Once issued, this certificate will reflect SciSure's continued compliance with the ISO 27001 framework and cover all active SciSure operations, including those previously managed under Labforward.

Although the Berlin office was not yet included in the certified scope at the time of the audit (due to the timing of the acquisition), all personnel and activities at that location are already following SciSure's ISMS, policies, and controls. This ensures continuous adherence to ISO 27001 standards across all parts of our organization.

SciSure remains fully committed to maintaining the highest standards of information security, data protection, and operational integrity for all our customers and partners.

Should you have any questions or require a copy of the renewed certificate once available, please contact our Security & Compliance team at **security@scisure.com.**

Date: 7 november 2025
